

Arrays in Java

Unlike C++, arrays are first class objects in Java. For example, in the following program, size of array is accessed using *length* which is a member of *arr[]* object.

```
// file name: Main.java

public class Main {

    public static void main(String args[]) {

        int arr[] = {10, 20, 30, 40, 50};

        for(int i=0; i < arr.length; i++)

        {

            System.out.print(" " + arr[i]);

        }

    }

}
```

Output:

10 20 30 40 50
